INTRODUCTION. Kidney transplantation is the treatment of choice for selected patients with end-stage renal disease (ESRD) [1]. A successful kidney transplant improves the quality of life and reduces the mortality risk for most patients when compared with maintenance dialysis [2]. Survival rates posttransplantation are similar for both hemodialysis and peritoneal dialysis patients [3].

Natural cloning. Cloning is a natural form of reproduction that has allowed life forms to spread for hundreds of millions of years. It is the reproduction method used by plants, fungi, and bacteria, and is also the way that clonal colonies reproduce themselves. Examples of these organisms include blueberry plants, hazel trees, the Pando trees, the Kentucky coffeetree, Myricas, and the American ...

x The kidney biopsy is an invaluable tool that has become the gold standard for the diagnosis of pathologic kidney diseases since the early 1950s. Throughout the years, immunohistologic and ultrastructural microscopy techniques have improved and provide more information on the cause and classification of kidney diseases than that available from simple light microscopy alone.
