REMOTE SENSING FOR CONSERVATION MONITORING: ASSESSING

atmospheric acoustic remote sensing pdf

Remote sensing is the acquisition of information about an object or phenomenon without making physical contact with the object and thus in contrast to on-site observation, especially the Earth. Remote sensing is used in numerous fields, including geography, land surveying and most Earth Science disciplines (for example, hydrology, ecology, meteorology, oceanography, glaciology, geology); it ...

Drones are now being used with laser scanners, as well as other remote sensors, as a more economical method to scan smaller areas. The possibility of drone remote sensing also eliminates any danger that crews of a manned aircraft may be subjected to in difficult terrain or remote areas.

The remainder of this paper is organized as follows. In Sections 2 Underwater acoustic sensor networks: communication architecture, 3 Underwater acoustic sensor networks: design challenges we introduce the communication architecture and design challenges, respectively, of underwater acoustic sensor networks. In Section 4, we investigate the underwater acoustic communication channel and ...

Infrahangnak nevezzük az olyan alacsony frekvenciájú hangokat, amik emberi füllel nem hallhatók. Megegyezés szerint ez a 16-20 Hz alatti frekvenciájú hangokat jelenti. Nagy hangnyomás esetén azonban az infrahang is észlelhető, mert a test belső szerveit rezgésbe hozza.
